Finding Derivations

This chapter is being written. *Motivating question:* "You know every propositional rule. Given a sequent, how do you find a derivation, or decide to stop looking?" *S3-PLACEHOLDER: this chapter is being written; its index is assembled at S3.*

What you need. Chapters 1 and 2. *S3-PLACEHOLDER*

3.-1.1 Roadmap

- **How to find a derivation.** The search method, assembled from the moves of the chapter, with worked searches, one search that fails, and all the rules in one place.

3.-1.2 Named moves

- **Work from both ends.** The full method: read the skeleton off the goal, use the premises by their main connectives, and keep the classical step for last.
