Models and Theories

This chapter is being written. *Motivating question:* "Do the axioms of a partial order prove that any two elements are comparable?" *S3-PLACEHOLDER: this chapter is being written; its index is assembled at S3.*

What you need. Chapters 1–6. *S3-PLACEHOLDER*

7.-1.1 Roadmap

- **Models and counter-models.** A meaning for every formula, in a structure with an assignment; a counter-model as a proof that a sentence does not follow.
- **Soundness for predicate logic** (optional). The soundness theorem of Chapter 4 extended to the quantifier and equality rules, with each side condition used in its own case.

7.-1.2 Named moves

- **Refute with a model:** a structure in which the premises are true and the conclusion false.
